"VASIL KOLAROV" DAM POWER PLANTS  
TO PRODUCE 9,600,000 KILOWATT-HOURS

The power plants connected with the "Vasil Kolarov" Dam will produce 9,600,000 kilowatt-hours of power per year, according to Engineer Mincho Chernov, director of the dam. Over 130,000 decares of the Plovdiv Plain will be irrigated, and the yearly state income will thus be increased by over 1,500,000,000 leva.

The workers engaged in expanding the "Asenitsa" Hydroelectric Power Plant have promised to finish the project by 21 December 1951. The new building has been completed, and machinery will be installed soon. The new installations of the "Asenitsa" Plant will use water from the Chaya River and will produce about 2,000 additional kilowatt-hours of power per year. After the water is used by the small power plant, it will be again directed into the large canal of the "Asenitsa" Plant and used by the large power plant. The power requirements of Asenovgrad Rayon will be satisfied by the new installations of the power plant.
